Three-vertex tree: convergence boundary and analytic continuation
a
Fixed-order hypergeometric-series diagnostic
q = 0.1 (inside)
q = 0.88 (near edge)
q = 0.8905 (outside)
q = 1 (outside)
Adjacent-order drift / |A_DE|
Appell-F2 cutoff, n_F2
b
DE continuation beyond the series domain
max rel. difference (80/96): 1.80e-44
max DE/hypergeometric residual: 1.71e-32
q = 0.9 pole
DE transport, pre-pole
DE transport after upper-half-plane detour
hypergeometric overlap (reused)
Re A(x)/Re A(1)
x = −log10 q
